

PORTABLE TOTE FOR CUTTING AND WELDING EQUIPMENT

ABSTRACT OF THE DISCLOSURE

A portable tote for cutting and welding equipment is provided that comprises a handle positioned along a center of gravity of the portable tote and a central extension that provides additional storage space for storage of hoses of the cutting and welding equipment. In other forms of the invention, the portable tote comprises water-resistant storage compartments, a storage holster, distal extensions for stability, and provisions for mounting of wheels, among other features.
